Pallet Transport Vehicle

Productivity 15%

The platform conveyor or pallet transport vehicle is used for the works transport. They assist by an efficient building to building logistic. They are already successful used in 3 work shifts. Each conveyor can be loaded with max.1500kg. The pallet trolley is designed for the transport of up to three pallets simultaneously.

„The first vehicles are running since 2013 in 3 work shifts. By using them our customer increased his productivity by 15% “

- Hydraulic driven compact modular conveyor belt system with anti-slip surface
- Extendable protective side walls against sideway dropping of palets while driving
- Individually customizable to your needs (e.g. Sensors for position detection of the trailer to off-load, Impact protection, Automatic shutdown of the conveyor belts at achievement of final position)
